 +       Code JupyterLab   Python

```
[ ]: # LCEL - |
      # prompt - prompt_Template
      # memory
      # streamlit
      # ->FastAPI
      # built chatbot - QA

prompt - building block of LangchainCode
----- - interact with LLM
        - it is an interface between taking an input from user and structring a sentence that
          to the LLM

PromptTemplate { input_variable = ["label"], template = "message {label}"}
```

```
